

Bald Eagle Lake Drain - Tentative Apportionment of Cost (%)

Parcel size and land use benefit is determined using the amount of hard surface on a parcel and multiplying by the total land area. Larger parcels and/or parcels with more hard surface will have higher apportionment than parcels that are smaller and/or grass/forest covered. This benefit applies to all 559 parcels in the district and uses the same methodology as is used to determine the apportionment to the County of Oakland and State of Michigan.

Lake benefit applies to 245 parcels in the district. The benefit applies in addition to the parcel size and land use benefit.
