## **APPROVED IGNITION INTERLOCK VENDORS LIST**

**Ignition Interlock:** An Interlock system is an alcohol detection device that is connected to your vehicle's ignition system. Each time you start your car, you must first blow into the hand-held part of the unit so that it can measure your breath alcohol concentration (BAC).

Your interlock unit **must** have a camera, and the threshold **must** be set to .01. Any time you experience a problem with your interlock (lock out, test positive, continuous requests for a retest), please report to a testing facility and submit to an ETG.

\*\*\*If you are installing an Interlock Device as a condition of Bond, the unit must have cellular reporting capabilities and it is YOUR responsibility to ensure it does.

**IMPORTANT:** While using an ignition interlock, please refrain from smoking, brushing your teeth, using mouthwash, eating or drinking for 15 minutes prior to testing. If you test positive on the interlock, and cannot submit a negative test within 15 minutes, it is your responsibility to submit to an ETG test within 12 hours. If you fail to submit to an ETG during that time, the court will assume the positive test was valid.

You have been ordered to refrain from the use of alcohol and alcohol products, while on probation. An alcohol product is defined as anything that contains alcohol, therefore it is your responsibility to read all labels before eating or drinking. Some examples are mouthwash, toothpaste, liquid cold medicine, some liquid capsules and food.
