

Maternal and Child Health Annual Data Report 2023

Birth Outcomes

Fertility Rates of Mother Oakland County, 2022

Overall fertility rate is the number of live births per 1,000 women between the ages of 15 and 44.

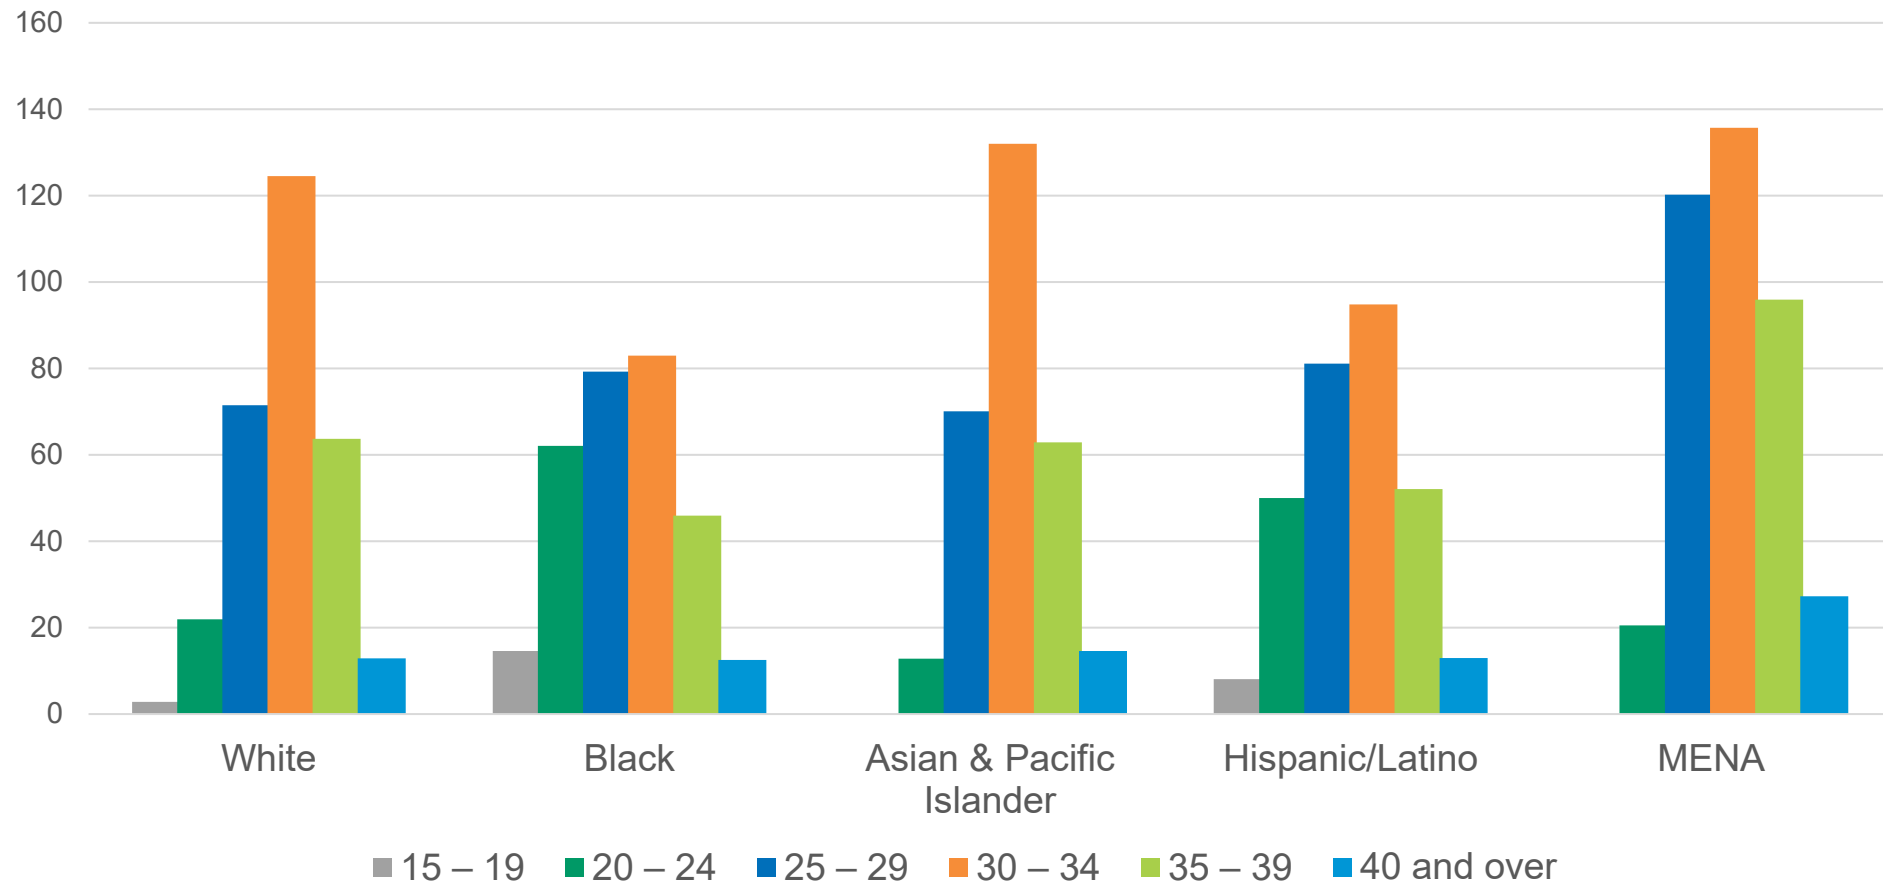

Fertility Rates by Age of Mother Oakland County, 2022

Fertility rate is the number of live births per 1,000 women in each age group.

Fertility Rates by Race and Age of Mother Oakland County, 2022

Fertility rate is the number of live births per 1,000 women in each demographic group.

Median Maternal Age by Race of Mother Oakland County, 2022

Maternal age is defined as the age of the mother at the time of childbirth.

Preconception and Environmental Factors

Characteristics of Mother Prior to Conception Oakland County, 2022

Deliveries Paid Using Medicaid Oakland County, 2022

Maternal Race	# of Deliveries Paid	Percent (%) of Deliveries Paid	Oakland County	Michigan
Total	2,753	<div><div></div></div> 22.2%	22.2%	38.8%
White	1,497	<div><div></div></div> 17.0%	17.0%	31.4%
Black	1,045	<div><div></div></div> 54.0%	54.0%	66.3%
American Indian	19	<div><div></div></div> 41.3%	41.3%	53.3%
Asian Pacific Islander	90	<div><div></div></div> 6.9%	6.9%	25.8%
All Other Races	85	<div><div></div></div> 34.6%	34.6%	61.9%
Hispanic/Latino	331	<div><div></div></div> 46.0%	46.0%	59.2%
MENA	121	<div><div></div></div> 15.7%	15.7%	54.1%

Inter-Pregnancy Interval <18 Months Oakland County, 2022

Inter-pregnancy Interval (IPI) is the time in months between the date of last menstrual period of current pregnancy and the date of previous live birth among multiparous mothers.

Maternal Race	# women with IPI <18 months	Percent (%) of women with IPI <18 months	Oakland County	Michigan
Total	2,205	33.3%	33.3%	32.8%
White	1,753	36.6%	36.6%	34.3%
Black	282	27.4%	27.4%	29.5%
American Indian	5	20.0%	20.0%	34.4%
Asian Pacific Islander	121	20.3%	20.3%	24.5%
All Other Races	33	24.4%	24.4%	26.5%
Hispanic/Latino	105	25.5%	25.5%	28.4%
MENA	177	43.6%	43.6%	32.6%

During Pregnancy

Pregnancy Risk Assessment Monitoring System (PRAMS)

What is PRAMS?	Measures Included in this Report
PRAMS, the Pregnancy Risk Assessment Monitoring System , is a surveillance project of the Centers for Disease Control and Prevention (CDC) and state health departments. Survey data is collected as a statewide representative sample.	Data is currently unavailable at the county level, so statewide data has been provided. Data were collected in 2022 and include alcohol and substance abuse during or prior to pregnancy.

Reported Tobacco Usage Before and During Pregnancy Michigan, 2022

All data on this page is from Pregnancy Risk Assessment Monitoring System (PRAMS).

Measure	# Sample Size	Percent (%) reporting use during pregnancy
Any cigarette smoking during the 3 months before pregnancy	160	12.0%
Any cigarette smoking during the last 3 months of pregnancy	83	5.7%
Any e-cigarette use during the 3 months before pregnancy	140	9.5%
Any e-cigarette use during the last 3 months of pregnancy	55	3.9%

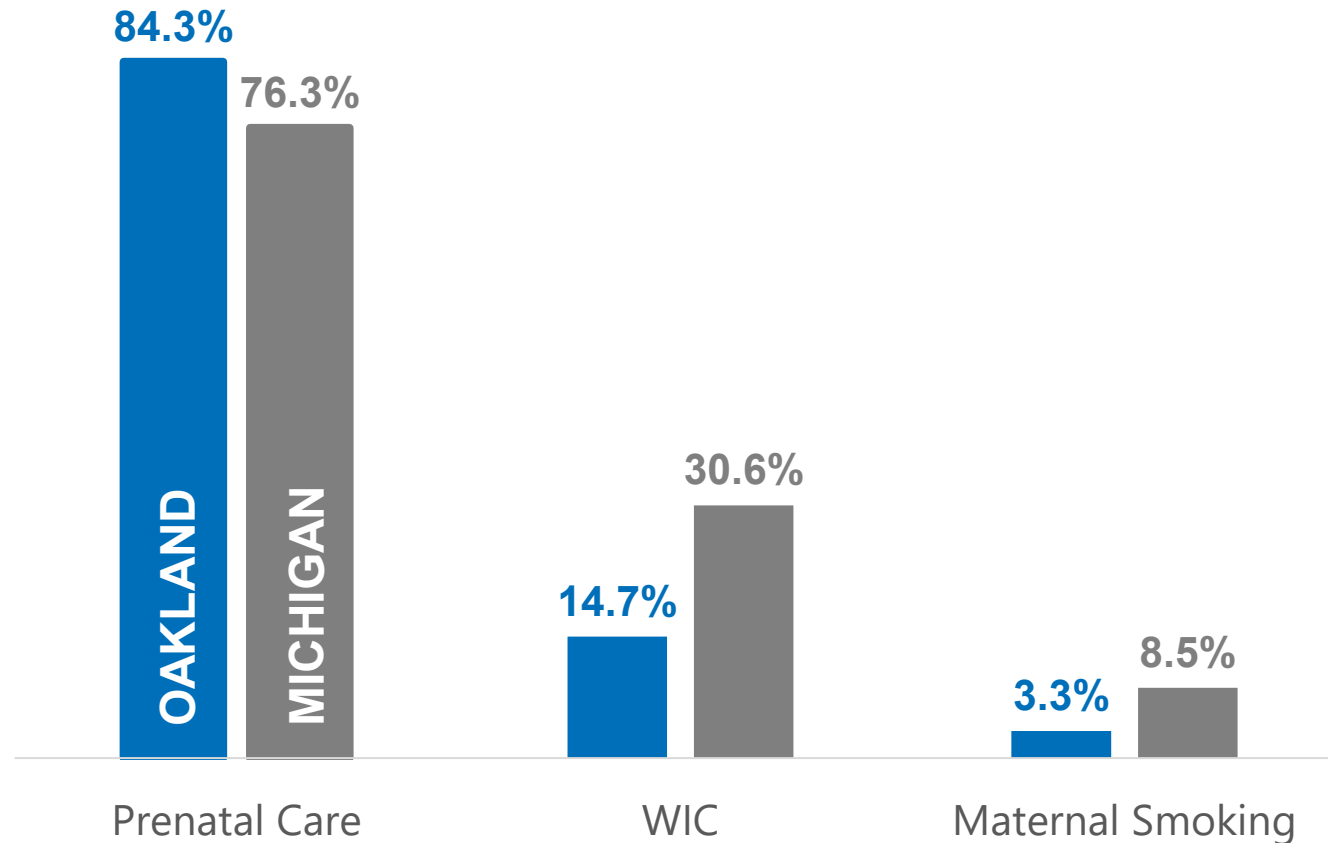

Reported Alcohol and Tobacco Usage Before and After Pregnancy Michigan, 2022

All data on this page is from Pregnancy Risk Assessment Monitoring System (PRAMS).

Substance	Measure	# of people		Percent (%) Reporting Use
Cigarette	Any cigarette smoking postpartum	99	7.0%	7.0%
Hookah	Hookah use in the last 2 years	77	3.9%	3.9%
Alcohol	Heavy drinking (≥8 drinks a week) during the 3 months before pregnancy	36	2.6%	2.6%

Characteristics of Mother During Pregnancy

Oakland County, 2022

Indicator Definitions

% Received prenatal care during first trimester

% WIC food during pregnancy

% Smoked while pregnant

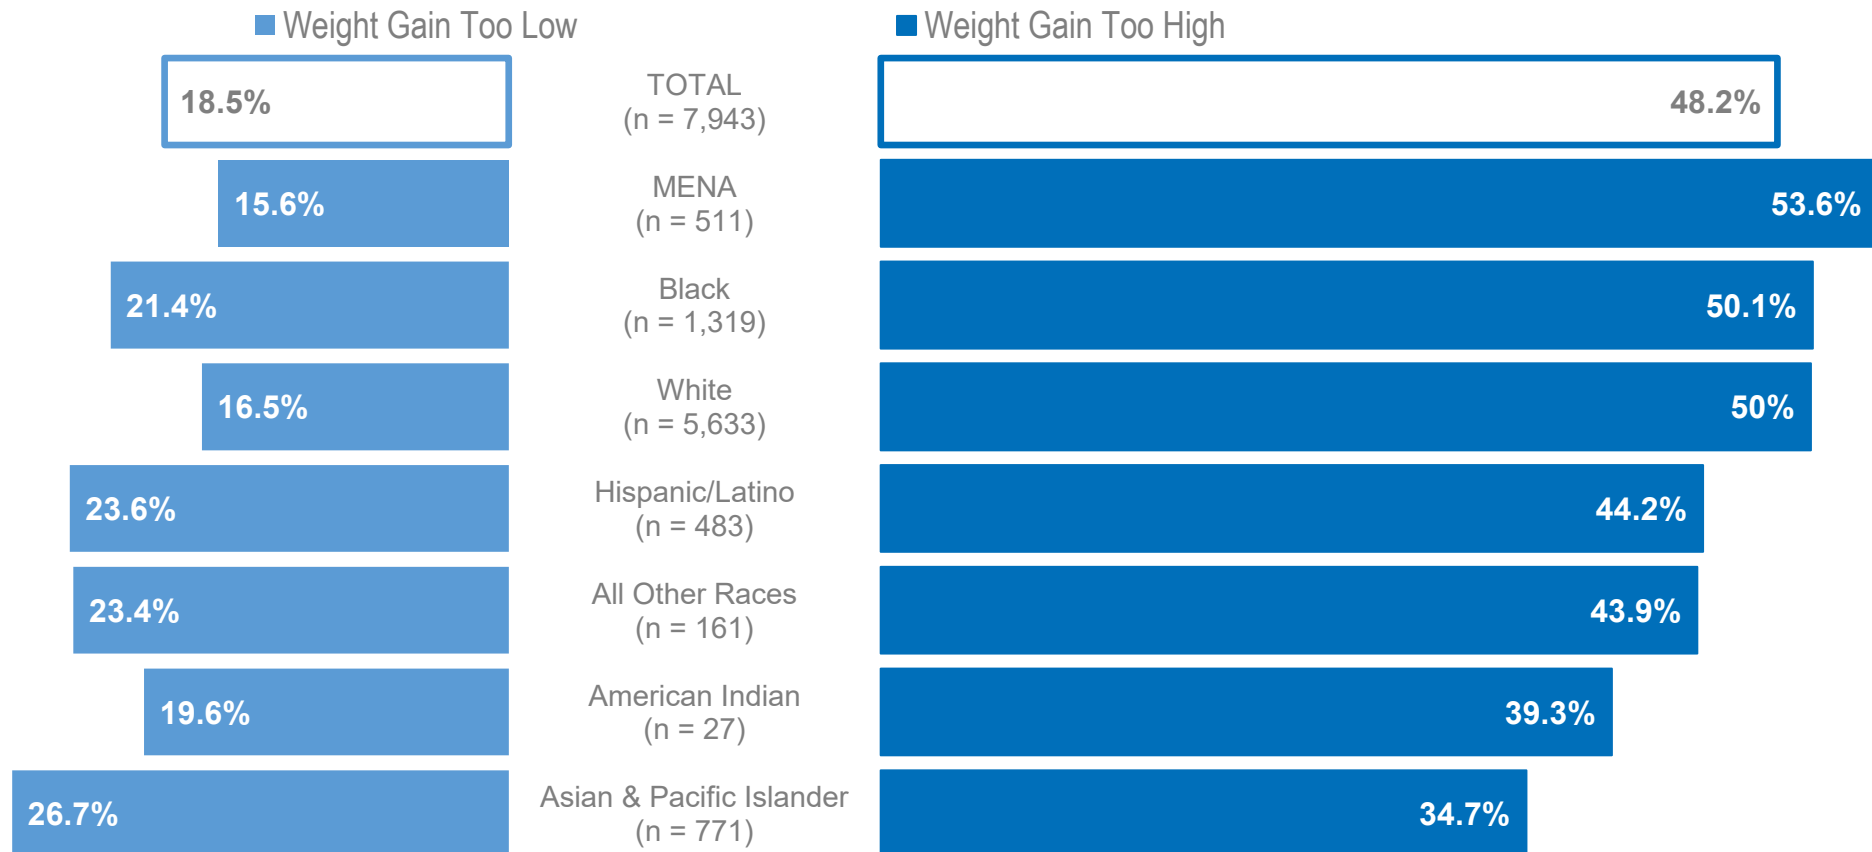

Reported Household Smoking During Pregnancy by Race Oakland County, 2022

Household smoking is defined as the mother or someone else in the household smoking during the mother's pregnancy, as reported on birth certificate records.

High or Low Weight Gain During Pregnancy Oakland County, 2022

Weight gain is considered high if it is above the Institute of Medicine (IOM) recommended range of weight gain.
Rates are expressed as per 1,000 singleton (singleton birth is a single birth delivery).

Gestational Diabetes During Pregnancy

Oakland County, 2022

Gestational Diabetes is characterized by the onset of Diabetes Mellitus during the current pregnancy.

Maternal Race	# Live Births to Mothers w/ Gestational Diabetes	Percent (%) Gestational Diabetes	Oakland County	Michigan
Total	893	7.2%	7.2%	7.3%
White	554	6.3%	6.3%	7.4%
Black	116	6.0%	6.0%	5.4%
American Indian	7	15.2%	15.2%	9.6%
Asian Pacific Islander	195	14.9%	14.9%	14.9%
All Other Races	17	6.9%	6.9%	6.4%
Hispanic/Latino	47	6.5%	6.5%	7.7%
MENA	64	8.3%	8.3%	10.7%

Pregnancy-Induced Hypertension (PIH) Oakland County, 2022

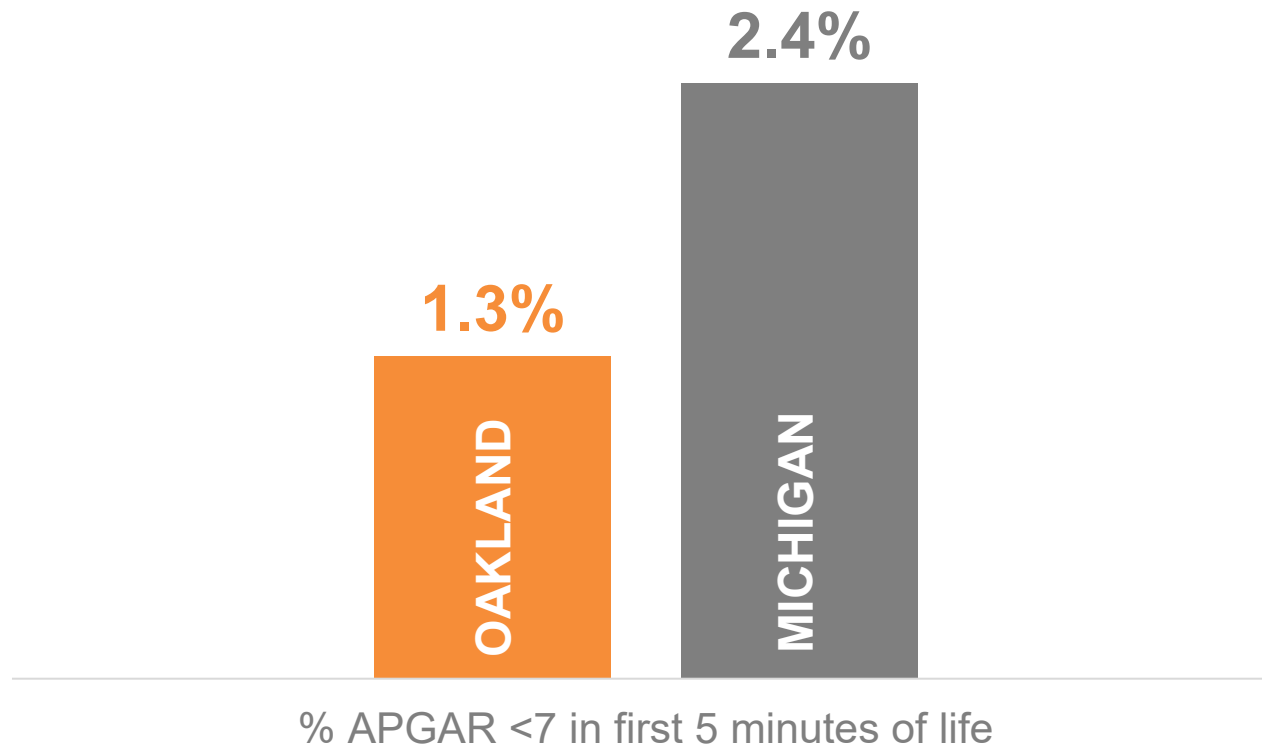

Gestational Hypertension is diagnosed when the mother experiences pregnancy-induced hypertension (PIH), pre-eclampsia, or eclampsia.

Maternal Race	# Live Births to mothers who had PIH	Percent (%) Pregnancy-Induced Hypertension	Oakland County	Michigan
Total	1,268	10.2%	10.2%	9.6%
White	933	10.6%	10.6%	9.8%
Black	232	12.0%	12.0%	10.1%
American Indian	5	10.9%	10.9%	9.6%
Asian Pacific Islander	78	6.0%	6.0%	5.8%
All Other Races	19	7.7%	7.7%	6.5%
Hispanic/Latino	47	6.5%	6.5%	7.9%
MENA	46	6.0%	6.0%	5.1%

Postpartum & Newborn Period

Infant Characteristics - APGAR

Oakland County, 2022

What is APGAR?

The APGAR (appearance, pulse, grimace, activity, respiration) score is used to evaluate the health of all newborns at 1 and 5 minutes after birth and in response to resuscitation.

APGAR scores range from 0 – 10.
7 -10 indicates normal; **4 – 6** indicates moderately abnormal

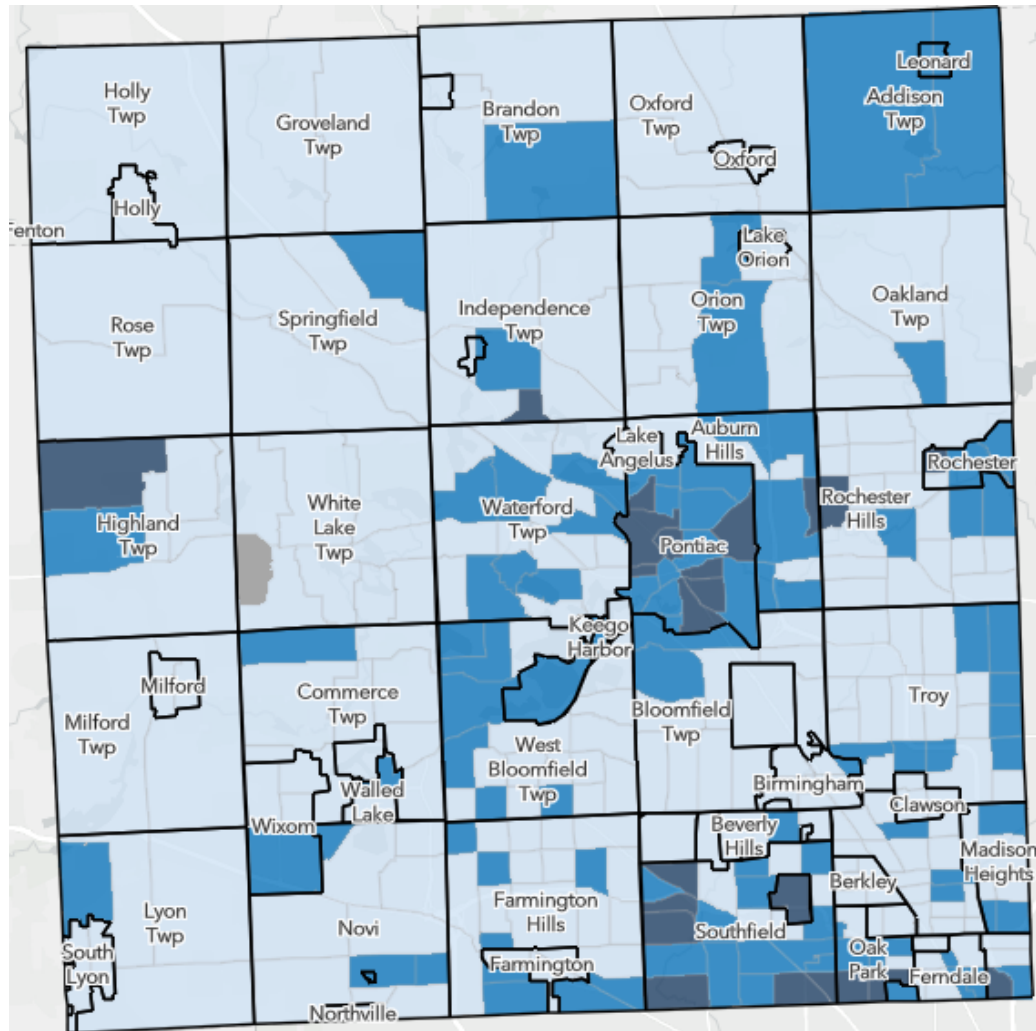

Cesarean Low-Risk Deliveries Oakland County, 2022

Low-risk births are defined as live births that are singleton, full-term (37 weeks gestation or older), with vertex present.

Maternal Race	# Low risk CS deliveries		Oakland County	Michigan
Total	3,139	<div><div></div></div> 29.5%	29.5%	28.9%
White	2,127	<div><div></div></div> 28.0%	28.0%	27.9%
Black	522	<div><div></div></div> 32.7%	32.7%	31.5%
American Indian	10	<div><div></div></div> 22.7%	22.7%	29.1%
Asian & Pacific Islander	412	<div><div></div></div> 36.2%	36.2%	35.2%
All Other Races	56	<div><div></div></div> 25.7%	25.7%	28.2%
Hispanic/Latino	167	<div><div></div></div> 26.4%	26.4%	28.3%
MENA	205	<div><div></div></div> 30.1%	30.1%	29.7%

Birth weight by Census Tract Oakland County, 2022

Low birth weight is defined as babies weighing less than 2,500 grams expressed as per 1,000 births.

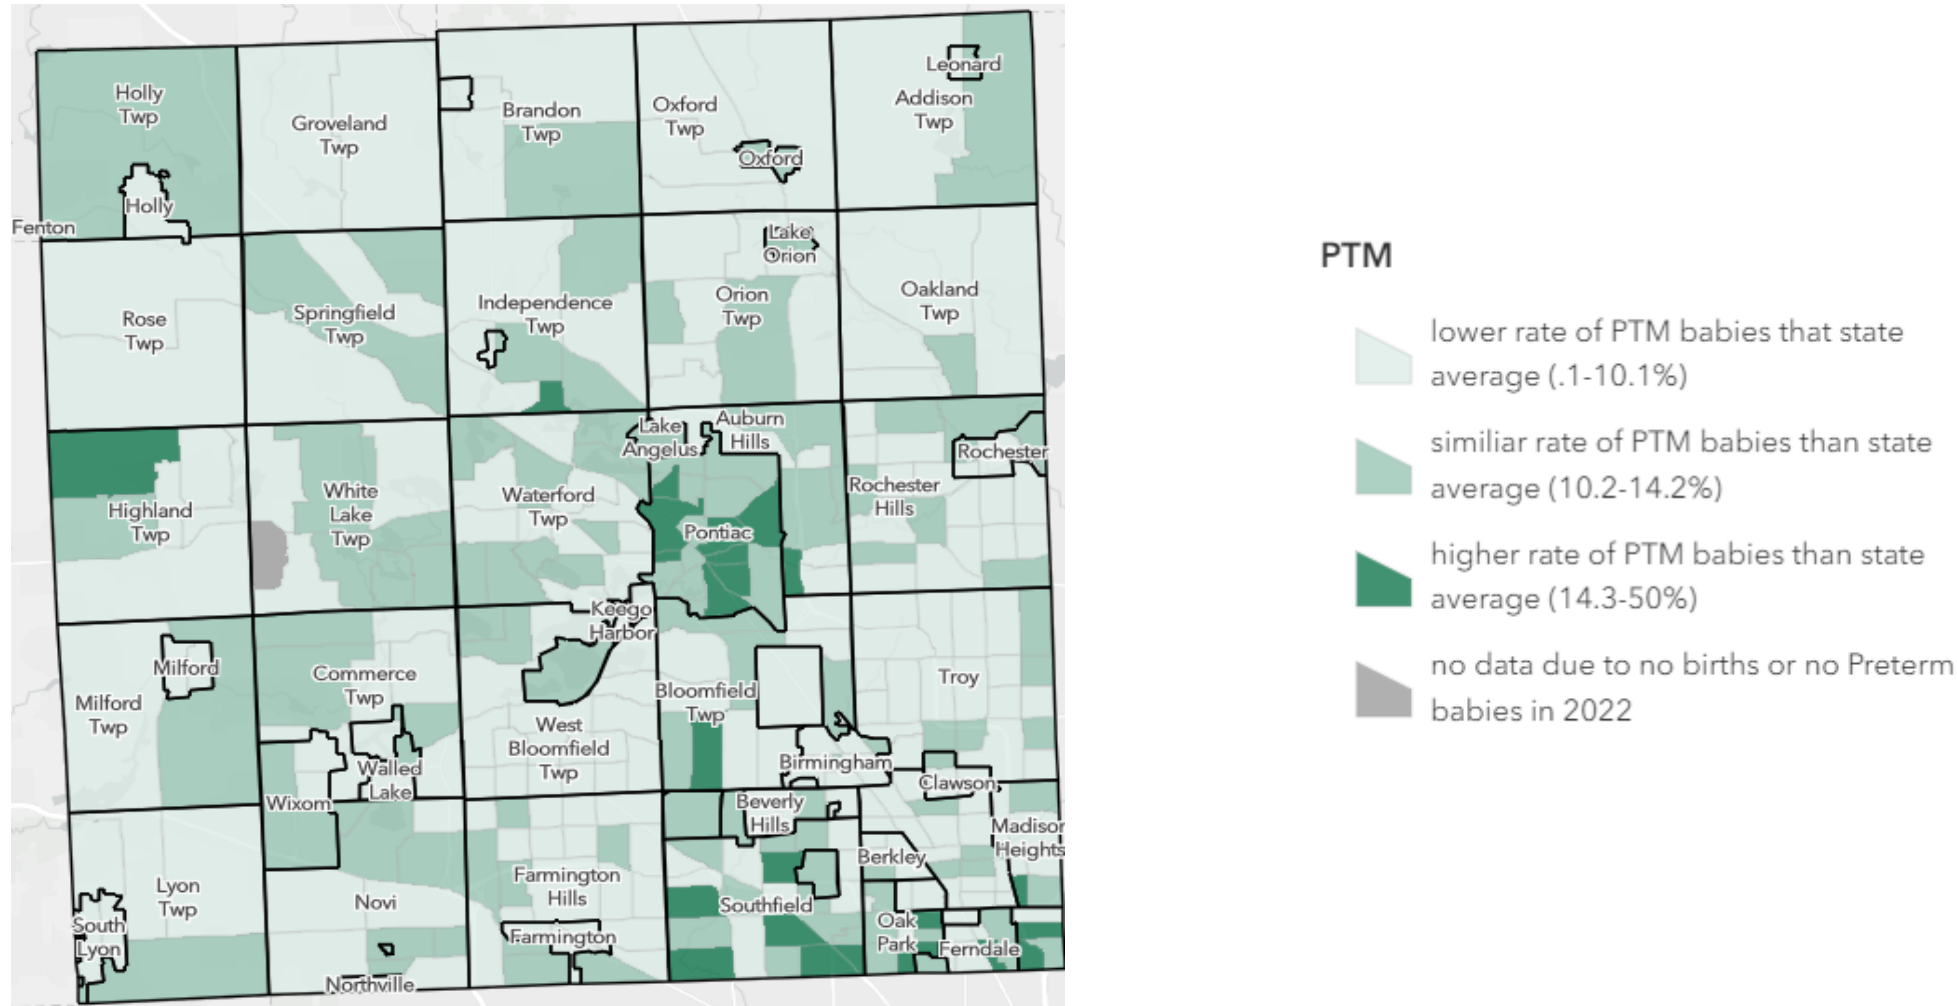

LBW

- lower rate of LBW babies than state average (.1-8.7%)
- similar rate of LBW babies than state average (8.8-13.1%)
- higher rate of LBW babies than state average (13.2-50%)
- no data due to no births or no low birthweight babies in 2022

Pre-Term Birth by Census Tract Oakland County, 2022

Preterm birth is defined as babies born prior to 37 completed weeks of gestation.

Average Number of Birth Defects Oakland County, 1992 - 2019

Birth defects are reportable if identified within the first two years of a child's life. The frequencies at one year and at two years serve to indicate the time from the birth of the child to the diagnosis of the condition.

Breastfeeding Initiation by Race Oakland County, 2022

Breastfeeding Initiated is shown here as the percent of the sum of two questions from the Michigan birth certificate:
The mother breastfed at discharge, or breastfeeding was planned after discharge.

Breastfeeding among WIC clients Oakland County, 2022

Breastfeeding for WIC is shown here as the percent of infants enrolled in WIC who initiated breastfeeding and are still breastfed at the end of the time period indicated.

Mortality

Infant Mortality Rate by Race and Ethnicity

Oakland County, 2022

Infant mortality rate is defined as the number of deaths of infants under one year of age per 1,000 live births in a given population. Race is determined based on the mother's recorded race on the birth certificate, and data are averaged over 3 years to ensure stability due to small numbers.

Leading Causes of Infant Death Oakland County, 2017 - 2022

Leading causes of death are based on all infant deaths that occurred in the county.

Number of Sleep-Related Deaths Oakland County, 2017 - 2022

Infancy & Childhood

Percent of Children 19-36 Months Up-to-Date On Primary Childhood Vaccine Series, Oakland County, 2022 - 2023

Recommended doses for the primary childhood vaccine series include (4)DTaP, (3)Polio, (1)MMR, (3)Hib, (3)HepB, (1)Varicella, (4)PCV.

Children under 6 tested for lead Oakland County, 2010 - 2022

Children under 6 tested with EBLL Oakland County, 2010 - 2022

In 2021, the CDC updated the blood lead reference value (BLRV) to 3.5µg/dL. This chart uses the updated BLRV to identify elevated blood lead level (EBLL) cases across all years shown. Data reflects EBLL as identified by confirmatory (venous) test where available. If venous test data is not available, screening (capillary) test data is used.

Children <6 with EBLL By Medicaid Status Oakland County, 2015 - 2022

In 2021, the CDC updated the blood lead reference value (BLRV) to 3.5µg/dL. This chart uses the updated BLRV to identify elevated blood lead level (EBLL) cases across all years shown. Data reflects EBLL as identified by confirmatory (venous) test where available. If venous test data is not available, screening (capillary) test data is used.

Early Childhood Development

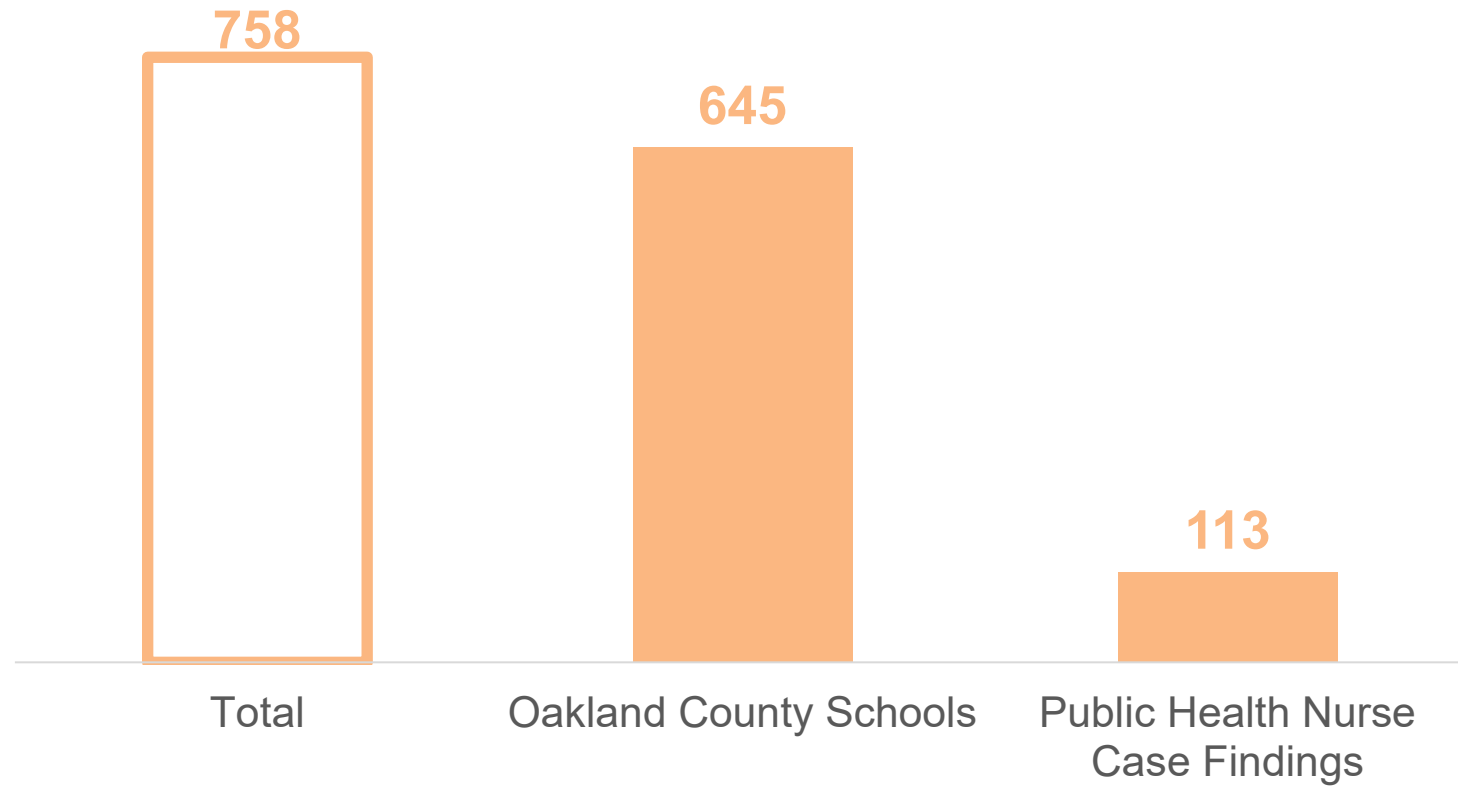

Early-On Referrals Oakland County, 2022

What is Early On?

Oakland County partners with **Early On** Oakland to assist children in the community that may need resources and support for developmental needs. This service is provided by skilled nurses that provide home visiting services to families that have children under age three. The nurses screen children and provide an evaluation of their skills, language and behavior for delays. A developmental delay is seen when a child's rate of growth and learning is different from that of most children the same age. If the child is identified as having a delay the child is enrolled in a free program called Early On to assist with their individual needs.

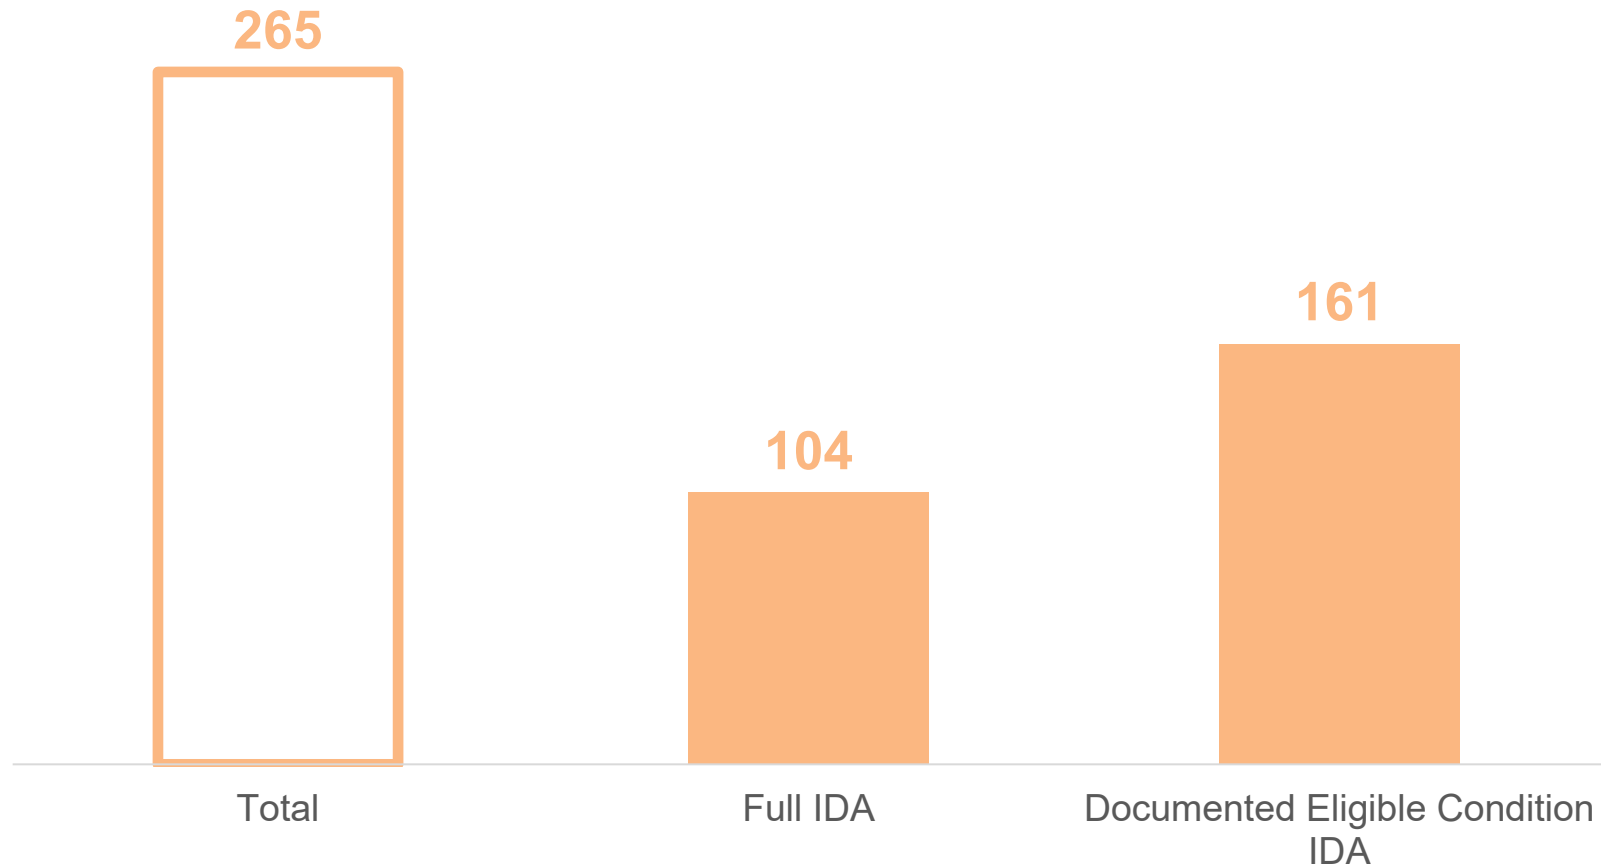

Early-On Referrals Received November 2022 to September 2023

Referrals are received by Oakland County Health Division from Oakland County school's or public heath nurses.

Infant–Toddler Developmental Assessments Completed July 2022 to June 2023

The Infant-Toddler Developmental Assessment (IDA) is a tool that measures all domains of child development and behavioral health.
Chart shows assessments completed by Oakland County Health Division, July 2022-June 2023.

About the Data

This report includes data from:

- Division for Vital Records & Health Statistics, MDHHS
 - Michigan resident live birth files and infant mortality files
 - Michigan Birth Certificate Registry
 - Michigan Birth Defects Registry
 - Michigan Resident Birth File
- Pregnancy Risk Assessment Monitoring System
- MDHHS Breastfeeding Rate and Duration Report
- Fetal Infant Mortality Report, 6-Year Report
- Michigan Care Improvement Registry
- MiTracking Data Portal
- MDHHS CLPPP Data Warehouse
- Oakland County Health Division Early On program data

Population Data Notes:

- The Arab population estimates includes estimates of Arab, Chaldean, Assyrian and Syriac ancestry. The Arab population is based on interpolation between the 2000 census and adjusted American Community Survey estimates, birth estimates or other sources. Estimates for smaller regions or age groups are subject to the same error as the ACS, and these errors may propagate into the interpolation. Care should be taken when using estimates for smaller regions or age groups.
- **If you have questions about the data, please follow up with:**
 - **Kaylia Johnson, MPH; Informatics Fellow; Oakland County Health Division**
